Abstract (en)

[origin: WO2016164724A1] A patient monitoring cable for transmission of electrical power and patient physiological data comprises at least one locking connector end having a connector configured to connect to a receptacle and a connector housing surrounding at least a portion of the connector. The connector end also has a depressible latch on the connector housing, the depressible latch having two flexible side portions that clasp notches on either side of the connector housing to maintain a top portion of the depressible latch elevated above a top surface of the connector housing. The side portions of the depressible latch flex outward to allow depression of the depressible latch.
