Abstract (en)  
[origin: EP3281882A1] The present invention relates to a mixing container for heterogeneous contents, more particularly, a mixing container for heterogeneous contents configured to be provided with a container body storing first contents and a pipette part storing second content separately from each other, wherein after the a pipette part is coupled to a lower portion of the container body, second contents stored in the pipette part when a rotation body is rotated move to the container body and then first and second contents are mixed, which not only makes it easy to fill contents to the container body and to assemble the container, but also makes it possible to select second contents stored in the pipette part as needed and to mix with the first contents for using.
