Abstract (en)
[origin: CN107697728A] The invention relates to a bobbin (2) having a winding (10) of a strip-like winding (3). On the outer peripheral surface (11) of the winding (10), two rings (13; 14) are wound with the winding (3). The rings (13; 14) have an axial spacing (15) that is less than the width B (18) of the winding (3). The end (17) of the winding (3) is thus fixed on the bobbin (2), so that the end is introduced into the gap (16) between the two rings (13; 14), where at the end (17), the frictional and/or form-locking are then fixed relative to the outlet. Therefore, no additional fixing means such as adhesive, welding, etc. are needed for fixing the loose end (17) of the winding (3).
