Abstract (en)

A connector element (5) for use in a flashing assembly for roof windows, has an exterior side (511), an interior side (512), a first end (513) intended for facing the window and a second end (514), two side walls (52) extending between the first and second ends and forming a gutter (53), and at least two flanges (54a, 54b) projecting from the interior side (512) adapted for engagement with a mounting bracket arrangement for two different roof windows mounted side-by-side, and where the connector element (5) comprises at least one point of attachment (531) adapted for engagement with a flashing member. Each side wall (52) is provided with a, preferably elongated, attachment element (57) on an outer side (521) facing away from the gutter (53), said attachment elements (57) being adapted for engagement with a corresponding attachment element on an extension element or adaptor element.
