Abstract (en)

[origin: WO2016167661A1] The invention relates to a combination for registering and improving the sitting behaviour of a person, the combination comprising: - a chair with a seat and a backrest tiltable relative to the seat; - at least a first motion sensor arranged on the chair for measuring the angle of the backrest relative to the seat; - a server for collecting and processing the measurements of the first motion sensor; - a network for connecting the at least one sensor to the server; and - a client device connected via the network to the server for receiving data processed by the server, in particular data for the purpose of improving the sitting behaviour. The invention further relates to a method for improving the sitting behaviour of a person.
