Abstract (en)  
[origin: WO2016166442A1] A movement assistance device comprising a first element (1) for rigidly connecting the device to one foot of a user and transmitting a thrust force to said foot; and a second element (2) linked to the first element (1) by link means (4) and intended to be in contact with the ground; the device further comprises means for transmitting a force from an exogenous energy source, to the first element (1) and/or to the second element (2), in order to separate them from each other.
