Abstract (en)
[origin: WO2016166197A1] The present invention relates to a sealing device (1) for making it possible to collect a composition that is intended for enteral or nasal administration or for topical use and is contained in a container. The sealing device is characterized in that it comprises: - a tip (2) that defines an internal passage (3) leading to an opening (4) and is designed to allow connection to a collection member such as an enteral syringe, - a non-return valve (5) that is associated with said tip (2) and is designed to open during collection of the contents of the container using the collection member, - at least one air-return port (6), and - an antibacterial filter (7) associated with said at least one port (6).
