Abstract (en)
[origin: WO2016166231A1] The invention relates to a continuous-flow production installation, in particular of an assembly and/or production line. The continuous-flow production installation comprises a conveying device for conveying a workpiece in a conveying direction of the continuous-flow production installation. The invention further relates to a platform for use in continuous-flow production, which comprises a guiding device and a processing device, wherein the platform is designed to be fed into and removed from the continuous-flow production substantially as a whole. The invention further relates to a method for operating a continuous-flow production installation or a platform.
