Abstract (en)
[origin: US2016297581A1] A closable container is provided, including a first wall of flexible material having a first interior face, a second wall of flexible material having a second interior face, the first and second walls being laterally opposed and arranged to form an interior volume of the closable container with the first interior wall and the second interior wall at least partially defining the interior volume, a first cooperative panel having a first cooperating face and a first joining face opposite the cooperating face, at least a portion of the first cooperating face comprising a first fastener element, and a second cooperative panel having a second cooperating face and a second joining face opposite the second cooperating face, the second cooperating face comprising a second fastener element configured to engage with the first fastener element to form an interlocking connection, the second fastener element being substantially identical to the first fastener element. The first joining face is joined to the first interior face at a first joint and the second joining face is joined to the second interior face at a second joint, at least one of the first and second joints being narrower than a width of the respective first or second cooperative panel.
