Abstract (en)

[origin: WO2016165912A1] The invention relates to an assembly for a household appliance (1) for handling items to be washed, comprising at least one washing drum (3) for receiving items to be washed, and comprising at least one ring-shaped imbalance compensation device (13, 14) that is installed in a circumferential recess (39) of the washing drum (3), wherein the washing drum (3) has a coupling region (24) for coupling with the imbalance compensation device (13, 14), which has two contact walls (28, 29) positioned at an angle to one another, and wherein the imbalance compensation device (13, 14) has a housing (18) with a first housing wall (18a) on which at least one coupling element (30) is formed, said coupling element being raised in the radial direction and projecting over the first housing wall (18a), and which coupling element has two coupling bars (32, 33) oriented at an angle β to one another, wherein each coupling bar (32, 33) is in contact with a respective contact wall (28, 29).
