Abstract (en)

[origin: WO2016192887A1] The invention relates to a method for making a flow conducting unit (16) cool down more slowly. In order to efficiently make the flow conducting unit (16) cool down more slowly, the flow conducting unit (16) comprises a holding unit (36) and is penetrated by a heat transfer medium, the temperature of the heat transfer medium is reduced such that a wall (40, 50) of the flow conducting unit (16) cools down, and the holding unit (36) dissipates thermal energy such that the wall (40, 50) cools down more slowly.
