Abstract (en)

[origin: WO2016166259A1] The invention relates to a so-called hybrid radiant heating appliance (10), characterised in that it comprises: a frame (11) with a rear face (12) that can be fixed to a wall of the room, the frame being connected to a radiating element (13) forming a face of the appliance; a first non-inertia heating element (14); and a second inertia heating element (1); said non-inertia heating element (14) being designed to heat the radiant element on one hand and to heat the second inertia heating element (1) by natural convection on the other hand.
