Abstract (en)

[origin: CA2976110C] This invention relates to a device (1) for storing and transporting aquaculture products (2), the said device (1) comprising a mobile structure (3), a continuous water circulating hydraulic circuit (7), at least one ballast pump (20) to periodically allow all of the water in a storage compartment (4) to be temporarily transferred to a technical compartment (6), controls to, at least, control a ballast sequence and a hydraulic ballast circuit (22) separate from the continuous water circulating hydraulic circuit (7), the hydraulic ballast circuit (22) making it possible to connect a low area (23) of the said storage compartment (4) with a distal area (24) of the said technical compartment (6).
