Abstract (en)
[origin: WO2016169549A1] The invention relates to an item of jewelery (1) comprising a base element (2) and at least one gem (3) which is mounted so that it can be moved in the base element (2) such that the gem (3) can move with respect to the base element (2). Said gem (3) is arranged, at least in areas, in a recess (13) of the base element (2) and is secured by at least one retaining element (4) to prevent falling out from the recess. Said retaining element (4) extends from the base element (2) slightly over one part of the upper side of the gem (3) such that the centre of the upper side is not covered by the retaining element (4).
