Abstract (en)  
[origin: WO2017016572A1] Disclosed is a storage container (1) comprising a modular container housing (2) that includes a plurality of housing modules (17) which are placed on top of each other in a vertical direction (3) and are coupled to each other in pairs. Housing modules (17) that are placed immediately on top of each other jointly delimit a slot (10) for an extractable and insertable tray element (12). Each of the housing modules (17) has a horizontal module wall (25) which runs transversely to the vertical direction (3) and from which a lateral module wall extends upward. At least one slot (10) is laterally delimited by a lateral slot wall (16) which is composed of a combination of an upward-extending upper lateral module wall (35) of a bottom housing module (17) and a downward-extending lower lateral module wall (36) of a top housing module (17) that is placed on the bottom housing module (17), the lower lateral module wall (36) being coupled to the aforementioned upper lateral module wall (35).
