Abstract (en)
[origin: WO2016169827A1] The invention relates to a container (2) for transporting and storing or presenting goods, comprising a bottom (4), a first side wall segment (6), which is articulated to the bottom and which can be folded about a folding axis parallel to the bottom between a first folding position and a second folding position, and at least one second side wall segment (8, 10), which is articulated to a side edge of the first side wall segment and which can be pivoted about a pivoting axis A perpendicular to the bottom between a first pivoting position pivoted laterally away from the first side wall segment and a second pivoting position. According to the invention, the first side wall segment and/or the second side wall segment have at least one angled side border segment (20) on the side edges facing each other and the two side wall segments are articulated to each other in such a way that the at least one angled side border segment of at least one of the two side wall segments lies against the other side wall segment in a planar manner at least in the first pivoting position.
