Abstract (en)

[origin: WO2016169889A1] The invention relates to a fitting for a sliding door (3) by means of which the sliding door (3) can be set into place in a parallel manner from a closed position which is substantially flush with the surface of at least one adjacent front panel (4) via a retaining fitting (6) in order to then be pushed at least partly in front of the adjacent front panel (4). The fitting comprises a guide fitting (7, 8, 9, 10), by means of which at least one part of the path of the sliding door (3) is guided from the closed position into a parallel position. In this manner, the sliding door can be guided in an exact manner on the furniture body even in the case of unfavorable door formats and weight loads.
