Abstract (en)

[origin: WO2016169646A1] The present invention relates to a system for monitoring the integrity of a component delivered by a server system to a client system and processible and/or implementable on the client system, having an integration system and having a sensor, wherein the integration system integrates the sensor into the component delivered by the server system to the client system, and wherein the sensor is embodied such that it is implemented during processing and/or implementation of the component and identifies modifications to the component.
