Abstract (en)
[origin: WO2016202760A1] The invention relates to an apparatus, in particular a high-speed slicer, for slicing food products into portions comprising at least one slice, having a slicing unit which is configured to separate slices from a product, wherein, in a cutting region, the slices drop, as a stream of slices, directly onto at least one carrier and form a portion on the carrier, having a moving apparatus for moving the carrier laden with portions out of the cutting region, having an introduction apparatus which is configured to introduce at least one further carrier into the stream of slices as soon as a portion has been formed on a preceding carrier, and having at least one control device for controlling the movements of the carriers, the slicing unit and/or the introduction apparatus.
