Abstract (en)  
[origin: WO2016173891A1] The invention relates to a container comprising a container body (1) having a container opening, and comprising a container closure (2) for the container opening (8), wherein the container body (1) and the container closure (2) are designed as an integral injection-moulded part and have a hinge (10), said hinge movably joining the container closure (2) to the container body (1), wherein the container body (1) has a container wall (3) forming a container chamber (4), wherein the container opening (8) is surrounded by an edge (9), wherein the container closure (2) is designed as a snap closure and can adopt an open position and a closed position, wherein the container closure (2) has a base (12) on which a skirt (13) is arranged, and the container closure (2) has a first sealing section (30) and a second sealing section (22), wherein the first sealing section (30) is arranged on an inner side of the skirt (13) and the second sealing section (22) is arranged on the base (12), wherein, in the closed position, the first sealing section (30) is in contact with an outer side of the edge (9) in order to form a first seal. The invention is characterised in that, in the closed position, the second sealing section (22) is in contact with an end surface of the edge (9) in order to form a second seal.
