Abstract (en)

[origin: CA2983761A1] The present invention relates to a plug connection (100) having: a plug connector (10) with, arranged thereon, a first coding element (12) with a coding pattern and an insertion location (50) with, arranged thereon, a second coding element (52) with a coding pattern that matches the coding pattern, wherein the plug connector (10) can be inserted, in an insertion direction (S), into the insertion location (50) as far as a coupling position, when the first coding element (12) and the second coding element (52) adopt a predefined relative position. According to the invention, the first coding element (12) can be rotated on the plug connector (10) about an axis of rotation (A) that runs parallel to the insertion direction (S), and/or the second coding element (52) is held on the insertion location (50) so as to be able to rotate about the axis of rotation (A).
