Abstract (en)

[origin: EP3289930A1] The combination package (10) includes a beverage glass (12) having an upper shell-shaped body (20) defining an upwardly narrowing tapered flume of generally uniform thickness terminating in a smooth upper rim (22) thereof defining an open mouth, and a lower base (32) opposite the open mouth; and a bottle (14) defining a container for retaining a beverage and a pour spout (50) for dispensing the beverage therefrom, the bottle having a size and shape for select slide-in reception through the open mouth of the beverage glass in an inverted orientation such that the upwardly narrowing tapered flume selectively engages a sidewall of the container for friction-fit engagement therewith, wherein engagement of the bottle with the beverage glass forms the combination package.
