Abstract (en)

In the roof window (1), each of a sash (3) and a frame (4) has two side members, a top member and a bottom member. The sash (3) carries a pane (5) and is connected to the frame (4) via a hinge device (2) including a pair of hinges (6) defining a hinge axis (\pm). The frame (4) is adapted to be connected to a load-bearing structure of a roof of a building. The frame (4) comprises a frame recess (44) facing the sash (3) and in which at least part of each hinge (6) is arranged. The frame recess (44) has a frame recess depth (df) and a frame recess width (wf) and is configured such that at least 60% of the width of each hinge (6) is arranged in the frame recess.
