Abstract (en)  
[origin: EP3290835A1] Refrigerated display case that comprises a display compartment (11) for food products and a technical compartment (13), separate from said display compartment (11) and located in fluidic communication with the latter. At least one evaporator (23) of a refrigeration plant (14) is installed in the technical compartment (13), a defrosting device (24) is associated with the evaporator (23). The technical compartment (13) comprises a first pipe (25) in which the evaporator (23) is installed and defining with the display compartment (11) a first circuit (26) for the passage of the air, and a second pipe (27) in which a eutectic container (28) made of deformable plastic is installed and defining with the display compartment (11) a second circuit (29) for the passage of the air. The refrigerated display case also comprises at least one fan (31; 131, 135), installed in the technical compartment (13) and configured to selectively generate a flow of air through the first circuit (26) or through the second circuit (29).
