Abstract (en)

[origin: WO2016177527A1] A supporting device (20) adjustable by an electric motor and intended for supporting an upholstered unit of a piece of furniture for sitting and/or lying on, in particular for supporting a mattress of a bed, has a main body (204) and a supporting arrangement (214) for supporting the upholstered unit and also adjustment means for adjusting the supporting arrangement (214) in respect of inclination and/or height relative to the main body (204). According to the invention, the adjustment means have at least one scissor-lift-like, Bowden-cable-actuable lifting arrangement (224), which acts between the main body (204) and the supporting arrangement (214).
