Abstract (en)
[origin: WO2016145148A1] An encasement system is disclosed. All of the embodiments include an outer encasement, which may be a decorative encasement, for example, normally provide on mattresses by mattress manufacturers. Unlike outer encasements provided by mattress manufacturers, the outer encasements disclosed herein are removable, for example, in order to replace one or more layers of a foam mattress core. The embodiments herein may include a cover and/or an inner encasement to facilitate rotation of the mattress core relative to the foundation of the bed. The encasement system is available as a passive device which provides the features mentioned above and an active device which additionally can be used to selectively lift the mattress to facilitate bed making.
