Abstract (en)

[origin: WO2016177980A1] The invention relates to a method for monitoring a support for a trolley comprising a stabilising means, said method comprising steps of lowering said stabilising means, calculating (103) a predicted height, calculating (104) the real height reached from parameters measured by sensors of the handling trolley, and comparing (108) the calculations of predicted height and real height so as to verify the coherence thereof. The invention is applicable to a device for monitoring a support for a trolley comprising a stabilising means.
