Abstract (en)

[origin: WO2016177462A1] The aim of the invention is to reduce the overall height of a magnetic coupling (1) which is particularly suitable for use in a magnetic stirrer. For this purpose, at least one magnet (4) of the rotor (3), which magnet is designed as a driving magnet for a counter-coupling piece of the magnetic coupling, particularly for a stirring magnet of a magnetic stirrer, and is arranged such that it projects at least partially or completely into a space (7) encompassed by a rotor-stator unit (5) of the magnetic coupling (1) and/or projects at least partially or completely into said space (7).
