Abstract (en)

[origin: EP3294046A1] The present invention relates to a lighting module comprising a flat flexible carrier (132) having at least one electrically insulating flexible substrate (104) with at least one planar electrically conductive lead (106), at least one light emitting element (102) and at least one electronic component (124), the light emitting element (102) and the electronic component (124, 126) and/or a second light emitting element (102) being electrically connected to each other by means of said at least one electrically conductive lead (106). In at least one stretchable region, said conductive lead (106) is patterned to form at least one meander loop, wherein said substrate (104) has at least one cut-out (114) that is provided adjacent to the meander loop in a way that the at least one meander loop partly encircles the cut-out (114).
