Abstract (en)

[origin: WO2017005495A1] The invention relates to a system comprising a set of passenger seat devices (100) in a transport unit (400). In order to create a system comprising a set of passenger seat devices (100) in a transport unit (400) and a control unit (300), in which the identification of seat locations is changeable, according to the invention a communication unit (115) exchanges data between the set and the control unit (300), wherein the control unit (300) is provided in order to detect a current seat location arrangement as a function of data of the set.
