Abstract (en)

[origin: WO2016179613A1] In an arrangement for indicating an intended end of the period of use of a textile product (1), the textile product (1) or a label (2) of the textile product (1) has an indicator field (3) which, in a first area (3a), has a first colour that changes during the period of use of the textile product (1) and in the course of the associated washes. The indicator field (3) additionally has a second colour in a second area (3b), wherein the wash-fastness of the first colour is less than the wash-fastness of the second colour, and the first colour differs, in the delivery state, from the second colour and, over a number of washes of the textile product (1), increasingly approximates to the second colour.
