Abstract (en)

[origin: WO2016180974A1] The invention relates to the linking of a user of a mobile terminal (12, 22, 32) to at least one data set, in particular in a selling market. A mobile terminal (12, 22, 32) has a receiver (13, 23, 33) for detecting a positioning signal. A register (14, 24, 34) detects shopping articles using an input means (15, 25, 35), and a means (16, 26, 36) terminates the detection process. The presence of a spatial and temporal concurrence allows the determination that the mobile terminal (12, 22, 32) is located within a specified spatial distance to the register (14, 24, 34) at the moment the detection process is terminated.
