Abstract (en)

[origin: WO2016180845A1] The invention relates to a device for storing electric energy. The device (1) has at least one electrolyte chamber region, and the electrolyte chamber region is at least partly filled with an electrolyte (10). The device (1) has at least one pressure generating device, and a desired pressure can be provided in the electrolyte chamber region or the pressure in the electrolyte chamber region can be changed by means of the pressure generating device. The invention also relates to a method for operating such a device and to a method for producing such a device.
