Abstract (en)
[origin: WO2016186875A2] A method, an apparatus, and a computer-readable medium for wireless communication are provided. In one implementation, an apparatus includes at least one processor configured to attempt communication with a first device via a first channel, connect with a second device associated with the first device in response to a determination that communication with the first device was unsuccessful on the first channel, and receive channel information associated with the first device from the second device, wherein the channel information indicates a second channel used by the first device.
