Abstract (en)

A booster seat (110) includes a storage compartment (150) for a tray (132) and/or a storage compartment (170) for securing straps (82). The tray-storage compartment (150) can be formed in a base (140) of the seat and include an access opening through a sidewall of the base. The tray-storage compartment can include two opposite and inwardly-extending lips that support the tray in the stowed position, and a support foot that moves between a use position in the compartment where it helps support the seat and a stored position displaced from the compartment. Also, the tray-storage compartment (150) can include ribs (66) that engage the tray (132) in the stowed position to retain it there. The strap-storage compartment (170) can be formed in the base (140) and include an access opening with a closure for retaining the straps (82) in the compartment (170). A base panel (140) can be provided for stability and support.
