Abstract (en)  
[origin: US2018078799A1] A belt of a roping harness having a flexible knit support strip designed to support the dorsal part of a user, an adjustment device of the circumference of the belt having first and second ends fixed to the support strip in first and second positions, and at least three resistance threads each sewn onto the adjustment device in specific third and fourth positions. At least one of the resistance threads presents a larger length than the distance separating its third and fourth positions along the support strip. The belt includes guidelines formed by a knit fabric which secure the resistance threads with the support strip in separated manner from one another in a direction orthogonal to the longitudinal axis of the support strip. The roping harness comprises a pair of leg loops having similar features.
