Abstract (en)

Builders are required to carry a large number of tools in order to carry out their work. Although there are many forms of portable tool box and tote tray on the market, the relatively high cost of these items, together with their lack of versatility and relative fragility has led to builders using a "builder's bucket" (9) in which to carry their equipment. When items are placed into the bucket (9), smaller items tend to fall to the bottom of the bucket (9), while larger items remain on top. According to the present invention, there is provided a bucket-tidy that may be inserted into a bucket (9) in order for equipment kept therein to be arranged tidily. In this way, items kept within the bucket may be quickly and easily retrieved by a user, without the need for searching, removing other items and/or emptying the bucket.
