Abstract (en)
[origin: WO2016184947A1] The present invention relates to a formwork device (5) for a battery mold (1) for producing structural elements, in particular precast concrete elements (27, 28), the battery mold comprising at least two bulkheads (5') and the formwork device (5) comprising two facing panels (11) that are preferably hingedly connected to one another such that they can be transferred from an unfolded state to a folded state. Each facing panel (11) has a front face (12) for the mounting of formwork elements (18) and a rear face (13), the rear faces (13) of the two facing panels (11) facing each other in the folded state. The formwork device (5) is designed to be located between the bulkheads (5') in the folded state. The present invention further relates to a system that consists of a battery mold (1) and at least one formwork device (5) according to the invention, said formwork device (5) being suspended in the battery mold (1).
