Abstract (en)

[origin: WO2016188734A1] A method for transferring control from an automatic controller to an operator comprises the steps: detecting a first time period, in which the automatic controller can be expected to be maintained; determining a second time period, which the operator requires to take over control; and outputting a notice to the operator when the first time period is greater than the second time period by less than a predetermined amount. The second time period is thereby determined according to a situation of the operator.
