Abstract (en)
[origin: WO2016186983A1] A package for a product includes a container, a closure adapted for assembly to the container, a first child-resistant feature incorporated into the closure and a second child-resistant feature integrated between the container and the closure. The first child-resistant feature includes a push-to-release tab which is inserted into a Slot, The second child-resistant feature includes a securing ring with first formations and being adapted to threadedly attach to the container. A closure body includes engaging formations such that the closure body is used to advance the securing ring onto the container and to remove the securing ring from the container.
