Abstract (en)

[origin: EP3095842A1] The invention provides for a fluid having a boiling point in the range of from 100 to 400°C and comprising more than 90% isoparaffins and containing less than 300ppm aromatics, obtainable by the process comprising the step of catalytically hydrogenating a feed comprising more than 95% by weight of a feedstock originating from syngas, at a temperature from 80 to 180°C and at a pressure from 50 to 160 bars. The invention also provides for a fluid having a boiling point in the range of from 100 to 400°C and a boiling range below 80°C, said fluid comprising more than 90% isoparaffins and less than 3% of naphthenes and having a ratio of iso-paraffins to n-paraffins of at least 12:1, a biodegradability at 28 days of at least 60%, a biocarbon content of at least 95%, and containing less than 100ppm aromatics. The invention finally provides for uses of the fluid.
