Abstract (en)
[origin: WO2016185005A1] The invention relates to a laundry-care appliance (100), comprising a detergent-solution container (109) for holding detergent solution, wherein the detergent-solution container (109) comprises a drain opening (113) and an inlet opening (111), wherein the drain opening (113) is arranged below the inlet opening (111) and is connected to the inlet opening (111) by means of a line (115), wherein a detergent-solution pump (117) is arranged in the line (115), and comprising a controller (127) for controlling the detergent-solution pump (117). The controller (127) is designed to activate conveying operation of the detergent-solution pump (117) in a first time segment in order to pump detergent solution out of the detergent-solution container (109) through the drain opening (113) into the line (115) up to a detergent-solution level (131) in the line (115). The controller (127) is designed to stop the conveying operation of the detergent-solution pump (117) in a second time segment following the first time segment in order to transport the detergent solution out of the line (115) through the drain opening (113) back into the detergent-solution container (109).
