Abstract (en)

[origin: WO2016144250A1] A system for generating fluid circulation in a conduit includes a pump (13) connected to a main conduit (3, 18, 23) by means of a first conduit (11) and a second conduit (16). The pump (13) is configured to draw fluid through the first conduit (11) from a first location at the main conduit (3, 18, 23) and to return the fluid through the second conduit (16) to the main conduit (3, 18, 23) at a second location. The first location is disposed downstream of the second location in relation to an intended direction of flow in said main conduit (3, 18, 23).
