Abstract (en)  
[origin: CA3023527A1] The present invention relates to an aircraft (1), comprising: at least one sensor (2) for measuring a wind (3); actuators (4) (motors (41), control surfaces (42), etc.); a data base (6) embedded aboard the aircraft (1), the data base (6) associating various values of wind measurement with various set points for the attention of the actuators (4). The aircraft (1) furthermore comprises means (5) of analysis and control, which are arranged so as, or programmed so as: - to receive values of wind measurement originating from the at least one sensor (2), - searching, inside the data base (6), for a correspondence of the wind measurement values originating from the at least one sensor (2), and determining (as a function of this search) the directives to be dispatched to the actuators (4), - dispatching these determined directives to the actuators (4).
