Abstract (en)

[origin: WO2016184457A1] The invention relates to identification plate strips (4) for a row of adjacently arranged electric terminals, comprising identification plates (3) which are formed separately and which are arranged adjacently to one another in a row and comprising connectors (5) which connect adjacent identification plates (3) and which are elastically flexible such that the row arrangement of identification plates can be stretched in the longitudinal direction. The connectors (5) are formed on the rear face of the row arrangement of identification plates (3) and extend in the longitudinal direction of the row arrangement, and each of the connectors (5) is molded on a rear face (10) of the identification plates (3) in a respective securing region (9) and are arranged freely in a flexible region (11). The invention further relates to an arrangement.
