Abstract (en)
[origin: WO2016184565A1] The invention relates to a method for implementing safety rules in a terminal (ME), in which a first safety element (SE) and one or more second safety elements (SE') are provided. Predetermined commands (CO) are transmitted to the terminal (ME) by the first safety element (SE). The first safety element (SE) monitors the compliance with predetermined safety rules (SP) with regard to information relating to the one or the second safety elements (SE') and uses the predetermined commands (CO) in the context of monitoring.
