Abstract (en)

[origin: CN107867011A] The present invention relates to a method and device for producing a hinged cover type packing box. During the production of a hinged cover type cigarette packing box, there is existed a problem of inserting a frame (17) or a shoulder in a bottom part of the hinged cover type cigarette packing box (10). The frame (17) showing a (rectangular) corner angle at a stop position is sent to a frame unit(35) under a flat folded state, and is set to be vertical with the help of a correcting member, namely a sucker (54), and by jointing the exterior of a frame part (18). Meanwhile, the frame (17) deforms with the help of a stop screw (57), so that the external outline of the frame (17) is less than the surface of a bottom wall (12), and accordingly, the deformed frame (17) is put in the bottom part(10) and forms an angle end shape.
