Abstract (en)  
An integral system of combined girthing for saddles, made up of a girth (1) joined to a saddle support (2) by means of a tension distributor (3). The girth (1) is made up of four pieces, two central pectoral pieces (4) and two lateral intercostal pieces (5); said girth (1) being joined to the saddle (6) by means of a series of tertiary pulleys (14). The tension distributor (3) is provided with a series of primary pulleys (7) joined to the girth (1) and to the saddle support (2); said primary pulleys (7) being mobile and joined to said tension distributor (3) by means of elastic elements. The saddle support (2) is made up of two lateral pieces (8) joined by means of a joining element (9); said lateral pieces (8) including a series of secondary pulleys (10) through which the extension (11) for joining the saddle (6) and stirrup strap (12) circulates.
