Abstract (en)
[origin: CN107869006A] The present invention relates to a warp knitting machine, in particular the warp knitting machine (1) is equipped with a rack (2) and a guide bar set (3). The guide bar set has a plurality of yarn guide bars (4) and can move along a continuous swinging direction (8) vertical with the longitudinal direction of the guide bar set via a driving mechanism (13). People want to realize the high working speed by a simple structure, so that the guide bar set (3) supports two supporting parts (6, 7) in a hinge joint manner, and the two supporting parts have a spacing with each other along the continuous swinging direction (8) and can move relative to each other.
