Abstract (en)
[origin: US2018088620A1] An operating assembly for an industrial truck comprises an operating lever and a resetting apparatus. The resetting apparatus is configured to interact with the operating lever to generate a resetting force for the operating lever that is dependant on its deflection. The resetting appatratus further defines a stop section for the deflection of the operating lever. The stop section comprises a rising edge and a falling edge, wherein the resetting force is reduced by a first additional stop force in the falling edge and increased by a second additional stop force in the rising edge.
